

24-CHANNEL USB AUDIO LOGGER

High Reliability USB 2.0 Recorder

Record calls automatically on your network server. This easy-to-install USB 2.0 recording module offers performance superior to loggers costing thousands more. Millions of recordings can be stored on disk-array with crystal-clear quality.

A USB cable connects to your existing Windows file server. Recordings are easily and securely accessed over your existing LAN. Self-installation on your server takes hours, not days. We'll gladly assist your installer or technician.

The universal line interface allows connection to outside or inside phone lines, voice mail systems, telephone handsets, radio systems and remote microphones.

Audio recordings are perfect. Multiple copies of calls can be made without degradation. Calls can be replayed instantly, even while recording. Powerful software produces evidence recordings in minutes, not hours.

Digital files can be copied, emailed, encrypted, and backed-up on any computer. No separate playback unit is required. Control playback privileges with Windows password security.

Utilities are included for evidence production, real-time remote playback and automatic backup to DVD+RW.

Call now and try your logger risk-free for 15 days. Dealer inquiries are invited.

- A quick USB 2.0 plug-and-play connection links your existing Windows server to the logger.
- A single 25-pair cable connects to outside or inside phone lines, voice mail systems, telephone handsets, radio systems and remote microphones.
- Automatic gain controls and selectable level settings for each line give you crystal-clear audio quality.
- Automatic voice activation (VOX) separates each call, adding a traceable digital signature with time and date stamp.
- FCC approved loop current sensors give perfect start/stop control on wet lines.
- Dry contact remote start/stop controls add flexibility when connecting to consoles, radios and microphones.
- Server-side software with automatic disk space management saves important calls while conserving disk space.
- A full site-license for Evidence Builder software is included. Install it on workstations to locate recordings by time, date, or geographic location to quickly find the calls you need. Reverse-index calls using caller-ID to locate the name and address of callers.
- Real-time playback allows live monitoring over your network.
- DVD-RW backup, recording scheduler, and other utilities are included. No annual software license fees are charged.

SERVER REQUIREMENTS

Professional installation on a dedicated 2GHz P4 CPU with 256MB memory running Windows 2000, 2003, or XP with a dedicated USB 2.0 port is required. Disk array storage is recommended for reliability.

PHONE LINE COMPATIBILITY

All standard analog audio sources, such as handsets, outside lines, microphones, and radios are compatible. Read more at www.digital-loggers.com/techtips.

Item No. MIL-24U

This component is designed for integration into a complete recording system by a professional installer. Complete systems with servers and disk arrays are also available. Visit www.digital-loggers.com for more information.

Applicable laws must be observed when recording.

© 2003 DLI. US patent 6,122,239, additional pending.
