

EMERGENCY NOTIFICATION LOGGER

12-Channel Audio Logger with ENS

"All deputies shall report to the sheriff's office immediately..."

"Facilities will be closed until further notice due to inclement weather conditions..."

"Immediate evacuation of the surrounding area is recommended..."

"Be on the lookout for a suspect fitting this description..."

"Volunteer firefighters should call..."

These are just a few applications. This 12-channel recorder works "double duty" as an Emergency Notification System (ENS).

In ENS mode, you can send thousands of calls in just minutes. Select a message and select a call list. Press start, and 12 calls are made simultaneously. Send hundreds or thousands of announcements with the click of a mouse.

In logging mode, you'll have crystal-clear recordings of every spoken word on up to 12 lines. Sort, access, email, and retrieve recordings from any PC on the network. Monitor live recordings in real-time. Locate calls instantly using Caller-ID, or numbers dialed.

Installation is simple, and maintenance isn't required. Attach a USB cable to your existing Windows server or workstation. Connect phone lines, load the CD and you're done! You'll have complete recording and the ability to send announcements on demand.

Everything you need to record is included. Just add a Windows PC, and you're up and running! Call today and try your ENS logger risk-free.

Applicable laws must be observed when recording.

© 2004 DLI. US patent 6,122,239, additional pending.

EMERGENCY NOTIFICATION MODE

- Makes ENS calls automatically to pre-programmed lists.
- Make 100 calls in 2 minutes, (3,000+ per hour.)
- Simple ENS operation. Just choose a target call list, and select a message. Use a preprogrammed recording or create a custom recording on the fly.
- Connects to up to 12 standard POTS phone lines, simultaneous dialing or recording all lines.

RECORDING MODE

- Records radio, telephone, microphones in logging mode.
- Recording software sorts calls from each line in a separate directory. Every recording includes a digital signature with time and date stamps for easy access.
- Automatic disk space management saves room for your most important calls. Older calls are automatically deleted to free disk space.
- Graphic LED meters show activity on all channels.
- Live monitor lets you listen in real-time while recording or announcing.
- Call Analysis Software sorts recordings using DTMF signaling. Calls can be easily located using DID trunk numbers, Caller ID, or outbound number dialed.
- Patented "Internet Reverse Lookup" researches the calling party's name and address when caller ID is available.
- Includes automatic DVD backup software.
- USB plug-and-play operation with Windows 2000, 2003, XP, or .NET
